Subject: RE: Chloroprene air monitoring

Hello Wilma,

The SPods did not trigger a canister sample on April 11, 2020 and we are currently reevaluating adjustments to the protocols. We hope to have more details soon.

Best regards,

James Leathers

Subject: Chloroprene air monitoring

The EPA air monitoring for Chloroprene around the Denka facility detected Chloroprene in the air at the Fifth Ward School on April 11, 2020 at 16.6/15.3 ug/m3. That was the highest concentration of Chloroprene at the Fifth Ward School of all concentrations detected at that location throughout 2019 and 2020.

Did the SPOD monitor at that location pick up a spike during the air sampling corresponding to the time period of the canister? If so what was the Chloroprene concentration?
